Nuestra visión

GrandIR trabaja en el ámbito del soporte técnico a repositorios institucionales universitarios y de centros de investigación. Los repositorios son bases de datos de publicaciones científicas que las mencionadas instituciones distribuyen en modo de acceso abierto, es decir, ofreciendo la posibilidad de consultar libremente su texto completo a través de Internet.

GrandIR pretende ofrecer a estos repositorios operativos o en proyecto toda una serie de servicios de soporte para contribuir a su desarrollo a lo largo de las diversas fases de su implantación. **GrandIR** se propone así trabajar como socio tecnológico de aquellos proyectos interesados en un servicio de apoyo, así como de la comunidad de acceso abierto en su conjunto.

De esta manera, **GrandIR** desarrollará su actividad en tres líneas de trabajo principales:

- Apoyo a la **creación y desarrollo de repositorios de acceso abierto** y servicios relacionados
- Organización de **sesiones de trabajo para la comunidad** de repositorios
- **Cooperación internacional** en la promoción de iniciativas relacionadas con el acceso abierto

***Campaña módulo
de Estadísticas***

First objective of the JISC-supported Sonex initiative was to identify and analyse deposit opportunities (use cases) for ingest of research papers (and potentially other scholarly work) into repositories. Later on, the project scope widened to include identification and dissemination of various projects being developed at institutions in relation to the deposit usecases previously analyzed. Finally, Sonex was recently asked to extend its analysis of deposit opportunities to research data.

THURSDAY, 15 APRIL 2010

CRIS/IR integration at Trinity College Dublin

Several initiatives are presently being developed at various academic institutions across Europe for materialising *Sonex usecase nr 2*, ie *CRIS systems* as a source of documents for Institutional Repositories. One of the most successful examples of system integration is taking place at *Trinity College Dublin (TCD)*, where integration between TCD in-house developed CERIF-based CRIS and *TARA DSpace-based repository* is under way (see for instance "*CRIS Cross: the repository in the research information system*"). APIs for ingest of metadata-only records from international databases such as WoS or PubMed were also developed at TCD as part of the interoperability effort. Finally, TCD solutions are being *exported* to developing countries via the *Irish-African Partnership for Research Capacity Building* and *eIFL.net*.

Enrich

The overall aim of Enrich is to improve the integration of [Enlighten](#), the University of Glasgow's institutional repository service with the institution's Research System. This project will place the role of the repository as one which is a natural part of the research management cycle rather one which is a separate and disconnected activity.

This project's objectives include:

- Establish Enlighten as a comprehensive University-wide repository and central publications database
- Provide tools to manage the deposit of content and identify missing publications
- Enhance access to the material in Enlighten by including it in the Library's "vertical" search tool (Encore)
- Develop clear policies with academic departments to ensure a sustainable and ongoing flow of content into the repository

Genotype 3
Azole resistance
CdCDR1
CdCDR2
Issue Date: 2005
Citation: Pinjen, E, Jackson, C.J, Kelly, S.L., Sanglard, D., Meron, G., Coleman, D.G. and Sullivan, D.J., Reduced azole susceptibility in genotype 3 *C. dubliniensis* isolates associated with increased CdCDR1 and CdCDR2 expression., *Antimicrobial Agents and Chemotherapy*, 49, (4), 2005, p1312 - 1318
Series/Report no: *Antimicrobial Agents and Chemotherapy* 49, 4
Abstract: *Candida dubliniensis* is a recently identified yeast species primarily associated with oral carriage and infection in HIV-infected individuals. The species can be divided into at least four genotypes on the basis of the nucleotide sequence of the ITS region of the rRNA operon. Previous studies have shown that a small number of clinical isolates belonging to genotype 1 are resistant to the commonly used antifungal drug fluconazole. The aim of the present study was to investigate the molecular mechanisms responsible for reduced susceptibility to azole drugs in *C. dubliniensis* genotype 3 isolates obtained from a patient with fluconazole-resistant oral candidiasis. Four isolates from a single clinical sample, one susceptible, the other three exhibiting reduced susceptibility to fluconazole, itraconazole, isavuconazole, voriconazole and posaconazole, were examined. Results showed that reduced susceptibility to azole drugs was associated with an increase in the expression of the multidrug transporters CdCDR1 and CdCDR2 which correlated with reduced intracellular accumulation of radiolabeled fluconazole. These findings, in conjunction with observations made in previous studies, overexpression of the multidrug transporters CdCDR1 and CdCDR2 in *C. dubliniensis* is a mechanism of resistance to azole drugs in the clinical isolates studied. This is the first time that this mechanism has been demonstrated in *C. dubliniensis*.

euroCRIS, CERIF y la *CERIF*icación de los sistemas CRIS

The screenshot shows the euroCRIS website interface. At the top left is the euroCRIS logo with the tagline 'Current Research Information Systems'. To the right is the full name 'The European Organisation for International Research Information'. A navigation bar contains links: HOME, euroCRIS at a glance, News, Task Groups, Events, Join euroCRIS, and Login. On the left is a 'SITE MAP' with two main sections: 'WHAT, WHY, HOW?' (including Structure, CRIS Concepts/Benefits, History of CRIS, Features of CERIF, Research Process & CRIS, and e-infrastructure & CRIS) and 'ORGANISATION' (including Board, Annual Report, Task Groups, Membership Directory, and Brochure). The main content area is titled 'euroCRIS Members in Ireland' and lists 'INSTITUTIONAL MEMBERS:' with 'Trinity College Library Dublin' as the sole member, providing its address and website. A contact point for Niamh Brennan is also listed. On the right, there are sections for 'ROME DECLARATION on CRIS and OAR' and 'PRODUCTS OF EUROCRIS' which includes links to CERIF Datamodel, Seminar Reports, Conference Publications, and Publications about CRIS. A small diagram in the top right corner illustrates the relationships between various research entities like Person, Project, Organisation, Publication, Patent, Product, Event, Funding, Service, Equipment, and Semantic layer.

What is euroCRIS?

euroCRIS is a not-for-profit organization, dedicated to the development of Research Information Systems and their interoperability.

Why should I need a CRIS?

To manage the portfolio of R&D activity whether a funder, research institution, innovator or the media and thence the public.

1. researcher CV and webpages;
2. portfolio of research projects;
3. researcher or organisational unit bibliographies;
4. expertise search (for innovation or reviewing);
5. innovation opportunities;
6. utilisation of facilities and equipment;
7. events and their outputs

ROME DECLARATION on CRIS and OAR

CERIFy

The project aims to increase engagement of the UK HE and commercial sectors with the Common European Research Information Format (CERIF) and Current Research Information Systems (CRISs) to a critical mass, and to support an emerging community of practice in Research Information Management (RIM). It will evaluate, test and demonstrate CERIF with four pilot UK HE institutions and one international commercial organisation (Thomson Reuters), which do not have working CRIS systems based on the CERIF data format, in a practical, 'end-to-end' process of people-centred organisational modelling, requirements elicitation, data analysis, data mapping, data exchange, and software demonstration, together with a programme of training, support, evaluation and dissemination. Thomson Reuters will 'CERIFY' their cutting-edge commercial service InCites: to enable two-way, interoperable, CERIF-compliant data exchange with the project's CRIS instances; to add value to validated institution-specific data; and to provide a valuable new view on current institutional research outputs.

CERIF for Datasets (C4D)

The screenshot shows the University of Sunderland website. At the top left is the University of Sunderland logo. To its right is a search bar with the text "Find a course" and a dropdown menu set to "Keyword/course code". Below the search bar is a green banner with the text "10 areas of 'world leading' research Latest Research Assessment Exercise". On the left side of the page is a navigation menu with links: Home, Undergraduate study, Postgraduate study, Short courses and CPD, Fees and funding, Student life, City of Sunderland, International, About the University, Research (highlighted), and Research Degrees. The main content area on the right has the heading "Introducing C4D" and a paragraph explaining the aim of C4D: "The overall aim of C4D is to develop a framework for incorporating metadata into CERIF such that research organisations and researchers can better discover and make use of existing and future research datasets, wherever they may be held. In order to demonstrate the facility of the approach a subject specific demonstrator will be built and this approach verified at the three partner HEIs, each within their own research administration infrastructure." Below this paragraph is another paragraph: "Whilst a survey of current datasets and metadata will be undertaken it is likely that the specific area chosen will be one in which the three University partner institutions are active;"
