LibrePlan in a few words

- **It is collaborative.** It allows different people involved in projects to take part in scheduling tasks.
- **It is multi-project.** It allows you to schedule all company projects as a whole because resources are shared.
- **It is free software.** You can download, install and customize it according to your needs.
- It provides a rich user **experience similar** to a **desktop application**. Only a web browser is needed to use it!
- It is ready for **third party software integration** and for interacting with other LibrePlan instances.

Highlighted features

Resource management

- Two types of resources: machines and employees.
- Calendars which are easily reusable and flexible.
- Resource categorization based on skills and roles.

Plan

- Work breakdown structure (WBS). It makes work definition and planning easy to manage.
- Two different levels of detail when planning.
- Two different resource allocation models:
 - Specific allocation. Actual employees.
 - Generic assisted allocation: Based on skills and roles satisfied by resources.
- Templates to reuse work. Projects can be created from time-saving templates.
- Automatic resource reallocation to minimize "overload" (overtime).
- Advanced allocation. LibrePlan offers a feature to allocate daily work hours by hand when automatic allocation does not fit.
- Monte Carlo method. Statistical simulation to calculate the probability of finishing a project in a given time interval.

Project monitoring and control

- Global analysis of the company.
- Earned value management. Project management method to measure progress and performance.
- Planning quality management. It is possible to define quality checkpoints for tasks through quality forms.
- Project cost analysis.
- Time tracker. Hours worked are tracked in tasks in order to calculate planning costs.
- Progress measurement. Several sort of measures: e.g. percentages units.

Outsourcing

LibrePlan considers outsourcing as part of the planning process:

- Project tasks can be outsourced and sent to the supplier's installation of LibrePlan.
- You can receive progress notifications from subcontractors in order to track managed tasks.

Other features

- **Material.** LibrePlan allows you to allocate materials needed for a project.
- Complete authentication system with permission management, LDAP integration and roles management.
- **LibrePlan** provides **labels** as a flexible way to **identify and sort tasks** in the planning projects.

Commercial support

- LibrePlan customization, deployment and consulting.
- Training. In-depth courses for users and developers are available.
- SaaS (Software as a Service). Hosting and deployment updates.
- Second-level technical support. As a LibrePlan deployer you can take advantage of the partnership program to answer any questions or get help.

Community

- The LibrePlan development model is open, transparent and public.
- The company ecosystem surrounding the project will safeguard the evolution and maintenance of LibrePlan.
- The community is always delighted to receive new members. You are invited to join us!
