PRESENTATION		
Quick access	It gives me great pleasure to welcome you to the Virtual Library of the Universitat Oberta de Catalunya. In your studies, in your	
Presentation	teaching and research work and as professionals, you will need to have all the information and documentation necessary at your	
Staff directory	fingertips in order to be able to achieve your goals. We have developed the Virtual Library to meet all your needs.	
Strategic plan	The Virtual Library is part of the UOC's educational model and is one of the most important support services for learning, teaching	
Reports	research and administration which the University places at your disposal over the Virtual Campus.	
	Taking advantage of the technological possibilities provided by the campus, the Library does not simply have a central virtual space but it enters the Class, the teaching, research and even leisure areas to provide a universe of knowledge on a range of media related to your work. You have available to you various basic sources with which to consult us:	
	 The Catalogue and the Digital Collection. The Catalogue includes both physical-format documents: books, journals, videos, CD-ROM, CD-I, etc., and electronic and digital documents, which you can access straight from the bibliographic record. We also provide you with access to other catalogues from around the world. 	
	 Among many other information resources, the Digital Collection contains specialist full-text databases and electronic journals on a great range of subjects. We should highlight the specialisation in the Information and Knowledge Society as a fundamental subject in the work of the University. 	
	 You can use a global search engine to find the information in the entire Library, regardless of where it is precisely. 	
	 In the Class, you will find a series of specialist resources and services in each subject, which will be of great interest for you in achieving your learning goals. 	

> Clear content structure providing concise, contextualized information.

> Improved clarity of textual information.

> Customized content by user needs.

> Transmission the values of quality and

> Increased proximity, information on services (and some content types). > Implementation of a unified and usable solution for searching contents.
