H Index

Meaning: The ***h-index*** is an author-level metric that attempts to measure both the productivity and citation impact of the publications of a scientist or scholar. The *h-index* is defined as the maximum value of *h* such that the given author/journal has published *h* papers that have each been cited at least *h* times. (source: Wikipedia)

H Index WoS

Web of Science: Make a search by author. We recommend to use the Index search provided by WoS. In the results page, *Create Citation Report*.

The screenshot displays the Web of Science interface. On the left, the 'Author Index' section shows a search for 'march h' with 67 records. A table lists records with their respective queries and authors. The 'Add' button for the first record is highlighted. Below the table, a message prompts the user to transfer the selected author(s) to the search page, with an 'OK' button highlighted.

The main interface shows the 'Web of Science' search results for 'AU=(March Hug*)'. The 'h-index' is 16 and the 'Average citations per item' is 14,8. The 'Create Citation Report' button is highlighted in the 'Analyze Results' section.
