

Estratègies comunicatives de promoció de l'activitat física saludable a les xarxes socials

Roger Salmerón

Universitat Oberta de Catalunya

Resum

En aquest article s'ha realitzat un anàlisi de la promoció de l'activitat física que es fa emprant les xarxes socials. Per dur-lo a terme s'han seleccionat catorze dels millors hospitals dels EEUU i s'ha realitzat un exhaustiu examen de la interacció així com un registre de les diferents formes que han adoptat les propostes relacionades amb la promoció directe de l'activitat física. A partir dels resultats i les categories escollides s'ha detectat un marc cognitiu que ens permet fer-nos una idea del tipus de regal que permet crear una comunitat, quines estratègies han estat les més vàlides alhora de crear un veritable sentiment d'affiliació a la promoció de l'activitat física saludable.

Paraules clau: Promoció de la Salut, usatges de les xarxes socials, tribu, donar regals.

Abstract

In this paper it has been done an analysis of exercise promotion by hospitals within the social media. Fourteen of the best hospitals of the United States of America have been selected and their social media environments thoroughly analysed. Results show the different communication strategies that hospitals practice to affiliate their consumers and the different uses of the social media involved in the gift-giving process of Health promotion.

Keywords: Health promotion, uses of social media, tribe, gift-giving.

Introducció

Internet i les TiC han suposat una autèntica revolució en la forma com la gent participa, comparteix i en essència es comunica. El desenvolupament de la societat de la informació en l'àmbit de la salut, passa per adaptar el llenguatge i objectius que caracteritzen la promoció de l'activitat física saludable a les noves formes de comunicació de la societat de la informació i el coneixement, les xarxes socials. Aquestes noves formes de comunicació basades en tecnologies orals i escrites han donat peu a que es creïn amb una enorme facilitat comunitats específiques o tribus, (Godin, 2008). L'objectiu principal d'aquesta recerca ha estat la construcció de les categories comportamentals que permeten definir aquest espai “tribal” de comunicació en els nous contexts comunicatius definits per les característiques tecnològiques de les xarxes socials. Per estudiar aquests nous contexts de comunicació, per dur a terme l'anàlisi, s'ha partit de set usatges de les xarxes socials (Richman, 2008):

- 1- Per comunicar informació concreta
- 2- Per promoure el suport o patrocini.
- 3- Per fer concursos.
- 4- Per dur a terme recerca de consumidors.
- 5- Per connectar als uns als altres.
- 6- Per proporcionar serveis als consumidors.
- 7- Per construir una comunitat.

Que han servit de filtre alhora de categoritzar les entrades a les xarxes socials relacionades amb la promoció de l'activitat física per determinar i definir els contextos comunicatius propis de la promoció de l'activitat física saludable. Sobretot s'ha tingut present (Godin, 2010) el “donar regals” com a pedra angular de la nova cultura comunicativa de les xarxes socials, amb això s'entén donar d'informació, coneixement o recursos per tal de fer possible el canvi de comportament. Ja que de fet “donar regals enforteix la connexió tribal” (Godin, 2010, p. 156) i per tant promou un determinat comportament, el de tribu, que en el nostre cas és la promoció de l'activitat física. Per dur a terme l'anàlisi s'ha utilitzat com a tècnica l'observació de l'activitat a les xarxes socials de catorze dels millors hospitals dels EEUU i el registre de totes les entrades relacionades directament amb aquest comportament.

Mètode

Participants

Per dur a terme l'anàlisi s'ha seleccionat una mostra de catorze hospitals. S'han seleccionat per la seva notorietat social, el seu reconegut prestigi dins i fora els EEUU i es caracteritzen per l'excel·lència dels serveis que ofereixen. Tanmateix no en tots els

hospitals la presència de les xarxes socials ha tingut la mateixa penetració ni presenten ni el mateix grau de visibilitat en aquestes, ni tampoc la seva activitats, propostes, serveis o volum d'informació són equiparables. Per tant, tot i ésser una mostra representativa d'alguns dels millors centres sanitaris s'ha buscitat i valorat com a positiva el grau de diferenciació que els fa singulars.

Materials i Estímuls

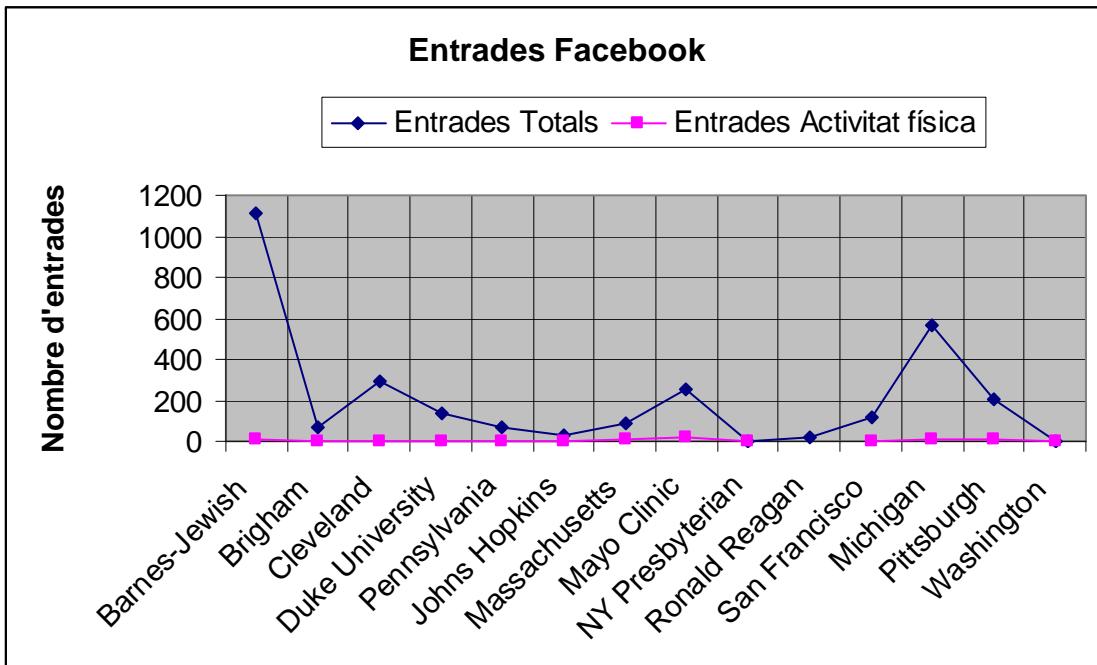

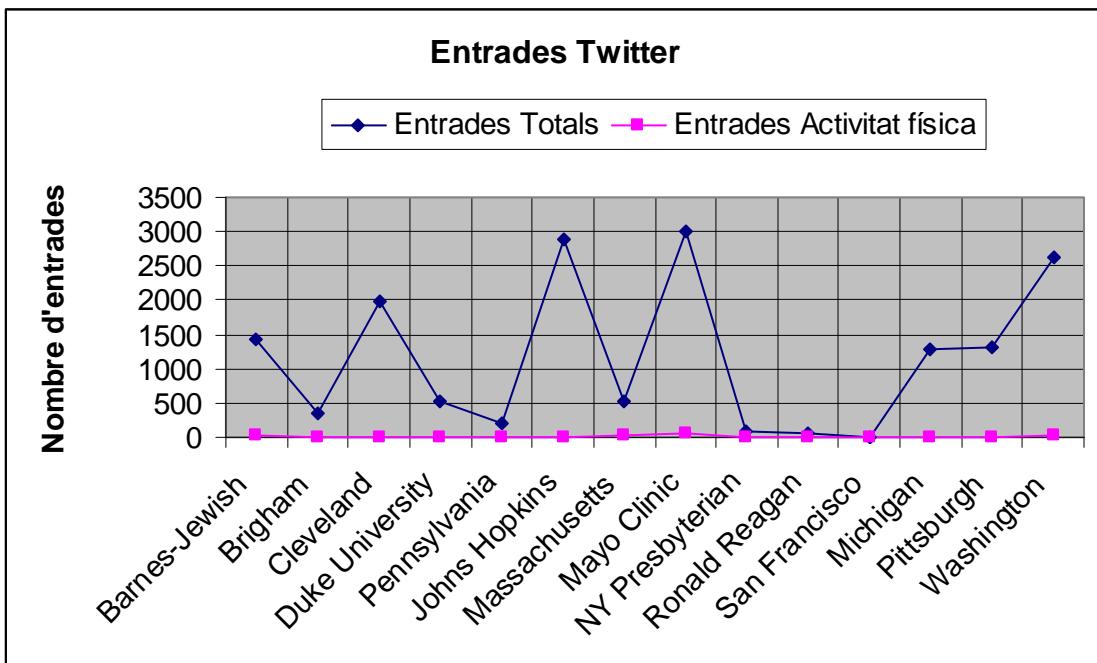

Per sondejar la presència i activitat que els participants de la mostra tenen en les xarxes socials els observadors han disposat d'ordinadors amb connexió a Internet ADSL o Fibra Òptica. A més, la navegació s'ha realitzat emprant navegadors d'ús estàndard com Microsoft Internet Explorer o Mozilla Firefox. Per enregistrar la presència d'activitat relacionada amb la promoció de l'activitat física als llocs del hospitals dins les xarxes social s'ha realitzat una captura de pantalla i posteriorment s'ha editat la imatge gràcies a un programa d'edició com el programari "paint" disponible a Windows XP o complementàriament s'ha redactat una petita descripció de la proposta. També s'han inclòs reflexions sobre pecularitats pròpies dels hospitals detectades. Totes dues formes de registre s'han desat fent servir un Processador de Text de tipus Word del paquet Office de Microsoft o Writer d'OpenOffice. Els resultats s'han exportat a una pàgina de tipus Excel del paquet Office de Microsoft o Calc d'OpenOffice per tal de poder operar amb els valors i generar gràfiques explicatives dels resultats obtinguts.

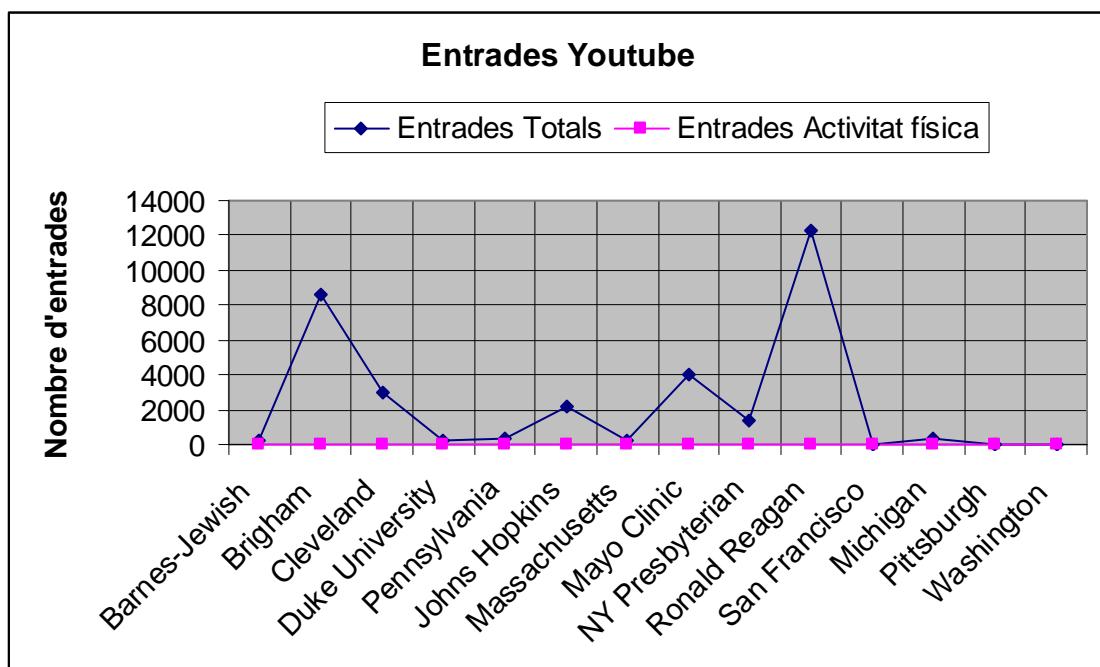

Procediment

El procediment ha constat de dues fases clarament diferenciades. En primer lloc s'han repartit els hospitals entre els diferents membres que constitueixen el grup de recerca de manera que cada membre realitza un ànalisi proporcional al dels altres en quant al volum d'informació a analitzar i les xarxes socials on es trobava. S'ha de puntualitzar que en cap moment el repartiment dels hospitals ha estat un repartiment rígid sinó que vist casos en que el volum de feina per hospital era desproporcionat s'ha procedit a una nou repartiment per tal d'equilibrar la situació. Els investigadors han procedit a realitzar un ànalisi exhaustiu del contingut dels hospitals en les xarxes social amb el material descrit anteriorment i s'ha registrat tant el nombre total de material disponible com el nombre total de referències directes a la promoció de l'activitat física saludable.

Resultats

A continuació es mostren els gràfics del nombre d'entrades totals i relacionats amb la promoció de l'activitat física saludable en cadascuna de les plataformes digitals utilitzades pels hospitals. Tenint en compte el nombre total d'entrades i el nombre total d'entrades referides específicament a la promoció de l'activitat física saludable:

A continuació es mostren els resultats obtinguts a partir de les categories escollides per a determinar des d'un punt de vista qualitatiu la intencionalitat i usos psicosocials que imperen en el fet comunicatiu:

Discussió

A partir dels resultats de les gràfiques de les diferents plataformes analitzades es pot concloure que la proporció del nombre d'entrades referides a la promoció de l'activitat física saludable és similar en tots els hospitals. Això vol dir que independentment del centre mèdic el grau de importància donen a la promoció de l'activitat física saludable és similar. Tanmateix l'objectiu d'aquesta recerca qualitativa posava l'accent en les diferents formes que prenia el fet comunicatiu. S'ha pretès analitzar les estratègies comunicatives que els hospitals desenvolupen per a la promoció de l'activitat física saludable, per trobar-les favorables. A partir de les gralles amb les diferents categories de les que s'ha partit s'han pogut identificar clarament tres estratègies comunicatives:

1.- *Comunicar.* Entès com la transmissió de nova informació que pot ser de l'interès de la persona a la que va dirigida.. Estratègia que persegueix que la persona és vinculi al context comunicatiu per tenir d'aquest una percepció de font d'informació i coneixement fidedigne, útil. Ha estat l'estratègia detectada més utilitzada en els diferents hospitals. Les TiC han obert nous universos simbòlic de comunicació al oferir noves característiques multimèdia. Internet de fet ha desplaçat als professionals de la salut com a la principal font d'informació relacionada amb el benestar i la salut, (Sarasota-Kahn, 2010). Per una altra banda, s'ha de tenir present que en la societat de la informació i el coneixement donat l'elevat nombre de dades a les que està exposada la persona el valor i utilitat d'aquestes és una qualitat essencial per fidelitzar el públic a una determinada plataforma o canal. Per tant, és una estratègia que si bé no és innovadora i podem considerar clàssica, és tremendament efectiva i adient per les característiques comunicatives pròpies de la societat de la informació i el coneixement. A més, es pot veure com és un recurs utilitzat en totes les plataformes analitzades. Això ens dona una idea de la seva versatilitat. És cert que la confiança sobre la informació disponible a la xarxa està per sota de la informació que ens facilitarà un professional (Lantz i Lanier, 2002). Tanmateix l'accessibilitat d'aquest determina en gran part la predisposició a la seva utilització com un recurs davant les circumstancies en les que la persona es pot veure involucrada.

2.- *Oferir serveis als consumidors.* Entesa com la utilització del canal comunicatiu per oferir nous o complementaris serveis als consumidors aprofitant les característiques tecnològiques de les plataformes. Des de la promoció de les seves instal·lacions a la dels serveis dels seus professionals de la salut. Aquesta estratègia conjunta la capacitat del centre mèdic de disposar i fer arribar informació útil i fiable pels interessos de les persones amb la orientació de la seva conducta per tal que partir d'aquesta informació la persona és vinculi d'una forma més estreta a l'entitat emissora, (Thorson i Beaudoin, 2004). És, per tant, una estratègia on l'entitat pren un rol actiu en la captació de l'atenció i conversió de la persona als interessos de l'entitat. Al contrari que l'estratègia anteriorment citada a la persona no se li transmet la informació sinó que es pretén recolzar-se en la validesa i consistència d'aquesta per orientar el comportament del consumidor de la informació de forma que coincideix amb els interessos de la mateixa entitat. Si l'estratègia comunicativa anterior l'entitat utilitzava la xarxa social com a plataforma on senzillament comunicar. En aquest segon cas és busca establir una relació

de bilateralitat, un feedback, per part del consumidor de la informació per tal que s'impliqui de forma activa en els interessos de la l'entitat.

3.- *Construir una comunitat.* Entesa com la creació d'una percepció de grup que reforci i orienti un col·lectiu al voltant d'una sèrie de valors i conductes determinades. Aquesta estratègia comunicativa és superior a les dues anteriors ja que en aquest cas la nova i valuosa informació que es transmet al consumidor no s'orienta de forma individual. Sinó a nivell grupal i per tant aprofita els mateixos mecanismes de la dinàmica intragrupal per aconseguir no una afiliació personal sinó la del grup sencer o col·lectiu de persones mitjançant l'orientació dels seus comportaments i conductes d'acord als dictàmens de la font d'informació, de l'entitat mèdica. És, per tant, una estratègia que suposa un nou nivell de complexitat i que explota acertadament que amb aquest tipus de tecnologies és posa de manifest que en realitat la gent més que parlar amb les fonts sobretot parla la una amb la altra, (Lefebvre, 2007). La gran virtut d'aquesta orientació és que el lideratge del grup parteix de la mateixa entitat. S'esperona l'afiliació al lideratge amb informació especialitzada i consistent, un tipus d'informació que difícilment podrà ésser rebutjada i que a més reforçarà la dinàmica comunitària, fent que treballi per la mateixa entitat. Per tant, la hipòtesi plantejada al inici de la investigació s'ha validat. La intencionalitat de crear una percepció de comunitat és una estratègia comunicativa que cultiven la majoria dels hospitals per tal de fer campanyes de promoció de l'activitat física saludable. Estimula la creació de comunitats basades en el lideratge de les entitats per mitjà de informació especialitzada que el consumidor sap valorar i per la que està decididament interessat. Això és especialment

Mayo Clinic

Facebook

Mayo Clinic Running a marathon can be a grueling effort, even for well-trained athletes. Runners can suffer electrolyte imbalances and even kidney problems. An important factor in all this is hydration. But how much and what should runners drink? Those are questions doctors at Mayo Clinic want to answer. They're studying the effects running has on the human body in hopes of being able to tell runners and other endurance athletes how best to prepare for an event.

Mayo Clinic Paying attention to nutrition and maintaining a healthy body weight can be advantageous to breast cancer survivors in reducing their risk of cancer in the future. This advice comes from Donald W. Northfelt, M.D., Hematology/Oncology, and Associate Medical Director of the Breast Clinic at Mayo Clinic in Arizona. In the ...video, Dr. Northfelt introduces a patient he attests is a "champion" for following that advice, given her serious commitment to fitness and nutrition. The patient talks about her experience at workshops on nutrition and fitness developed by Mayo nurses in the Breast Clinic and put on at a fitness center.

Mayo Clinic Think about what it takes to run a marathon. Months of training and preparation. Now imagine running a marathon every single day. That's what extreme athlete Diane VanDeren does to prepare for her races – unbelievable distances of 100 to 435 miles. She's teamed up with doctors at Mayo Clinic to help them learn more about what makes elite athletes able to accomplish such feats. Especially for an athlete like

Diane who overcame a debilitating illness to become the world's most elite female endurance runner.
