

Taking stock: results of the Open Knowledge Action Plan (2018 - 2020)

Scientific publications

We have significantly increased the number of open access scientific publications in the UOC's O2 repository.

+2.000
articles

+ 150
PhD these

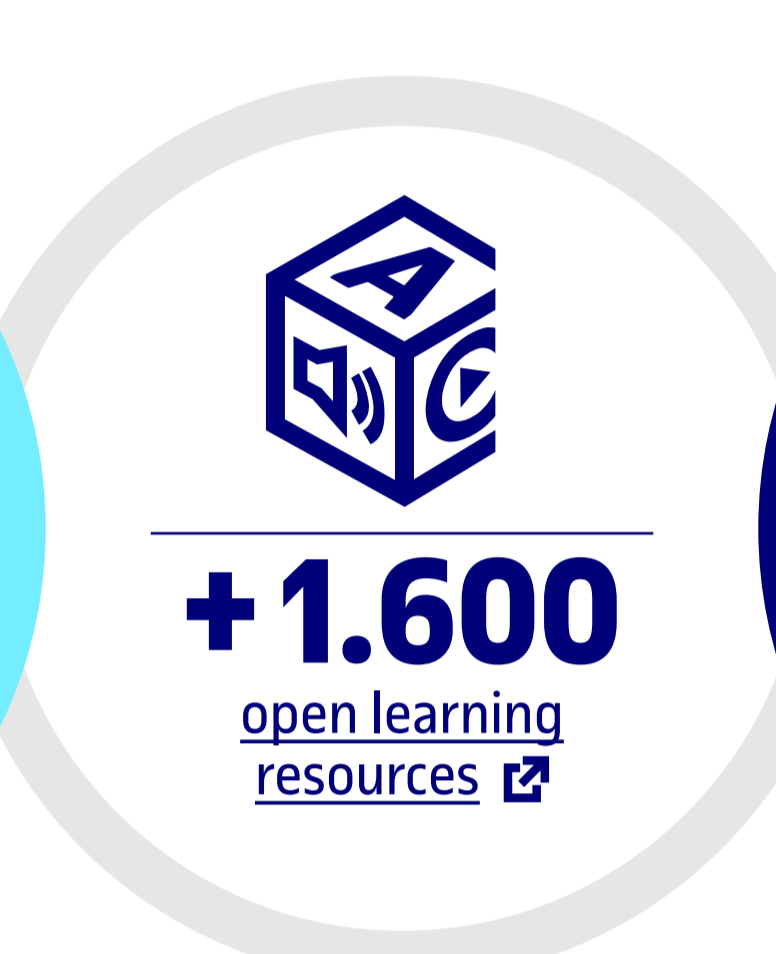

52 %
articles by UOC researchers are open access

FAIR research data

The [FAIR Research Data](#) Management Support Service is now operational.

Learning resources

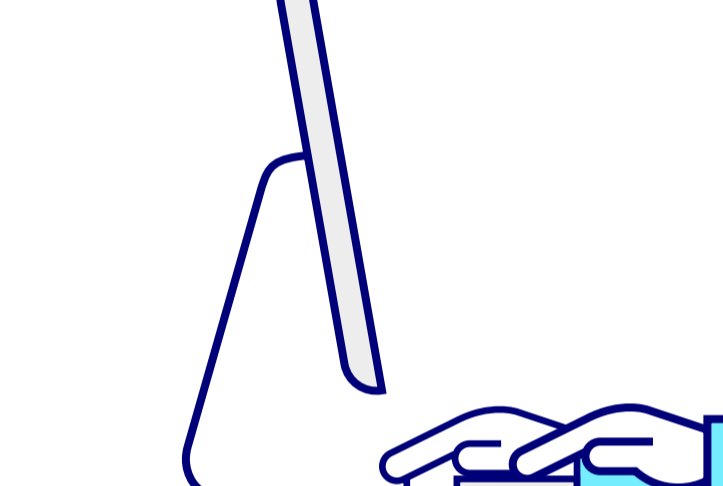

Open innovation

Hubbik

A community of over 125 entrepreneurs is taking advantage of the recently launched [Hubbik Virtual Incubator](#) with a view to pooling efforts and finding solutions to the challenges facing society.

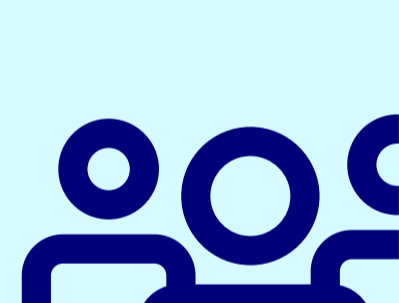

Premi Gabriel Ferraté

We have also partnered up with the Universitat Politècnica de Catalunya to develop an open innovation programme as part of the [Gabriel Ferraté Award](#). The aim is to answer the question: How can technology help people who are suffering from loneliness?

Open to society

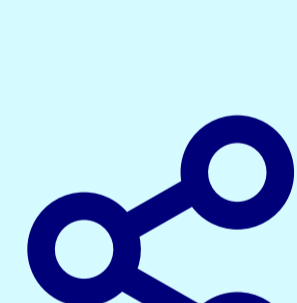

Research conducted at the UOC seeks to tackle society's challenges and empower citizens to take an active part in the co-creation of knowledge.

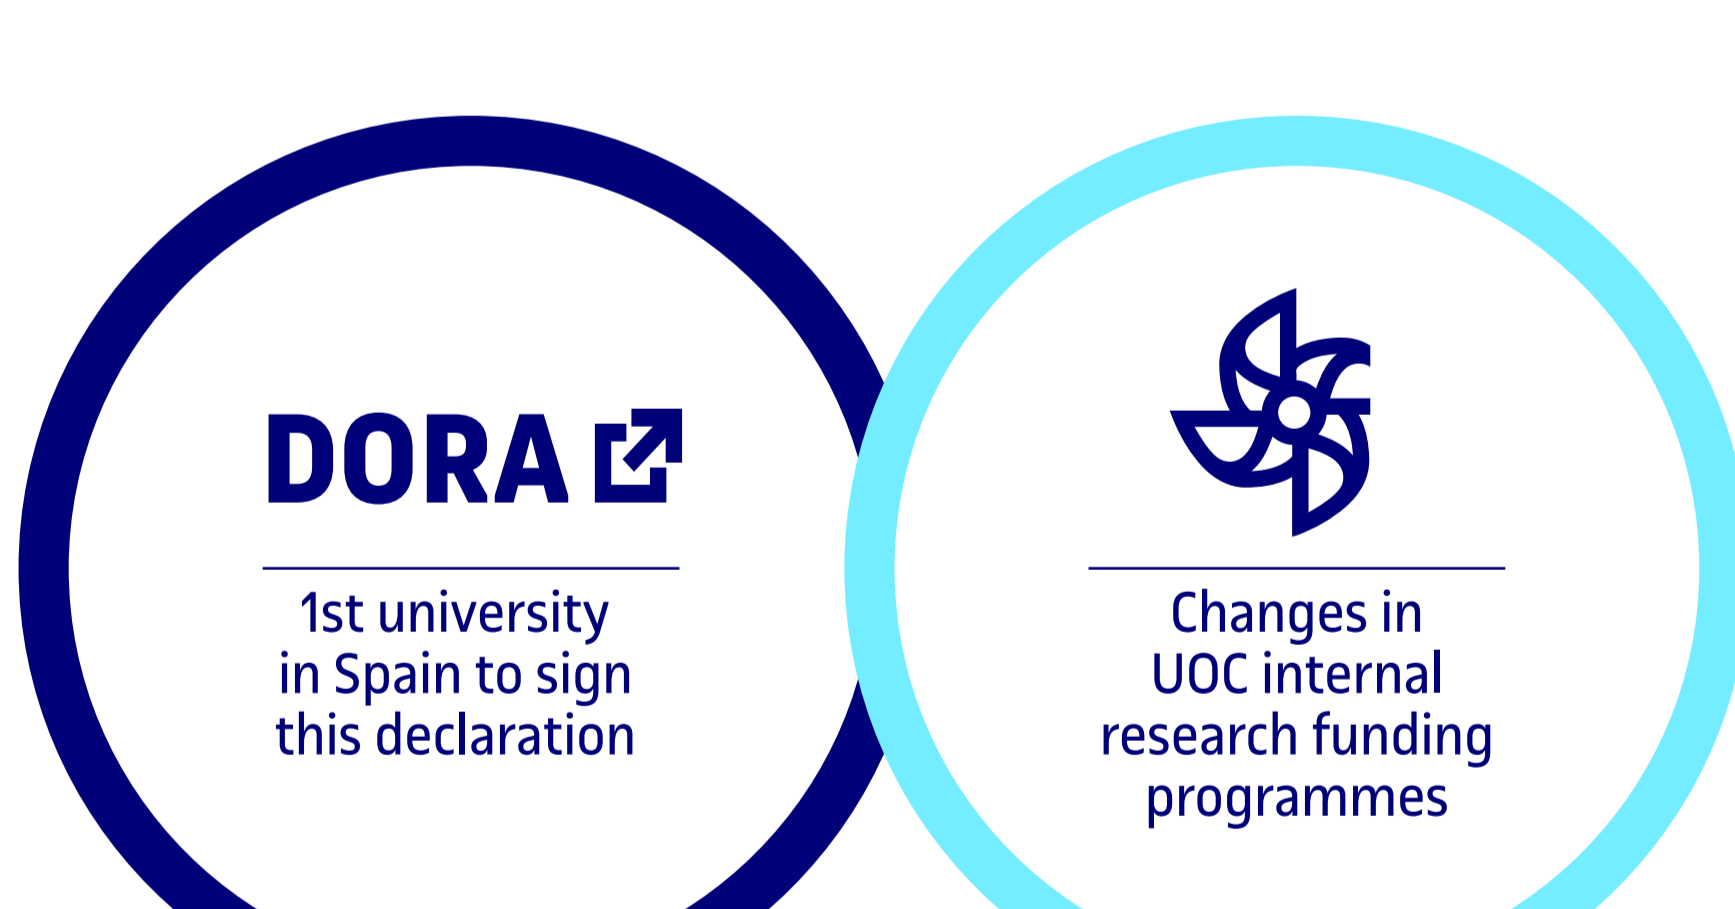

We are promoting the [participatory final projects](#) programme, which lets students develop applied research in collaboration with voluntary organizations and bring their solutions to specific problems in our society.

We make efforts to reach out to other bodies and organizations to create spaces where people engaged in academia, culture, art and society can gather and create together. This type of collaboration takes many forms, such as the series co-organized with the Sala Beckett theatre or the Phenomena cinema, the Biennial of Thought and the City and the Science Biennial in Barcelona, or festivals like Ars Electronica.

Research assessment

Communication, training and awareness

We are encouraging reflection on the processes involved in research and innovation.

[Projecte CIRCLET](#) [Curs RRI](#)

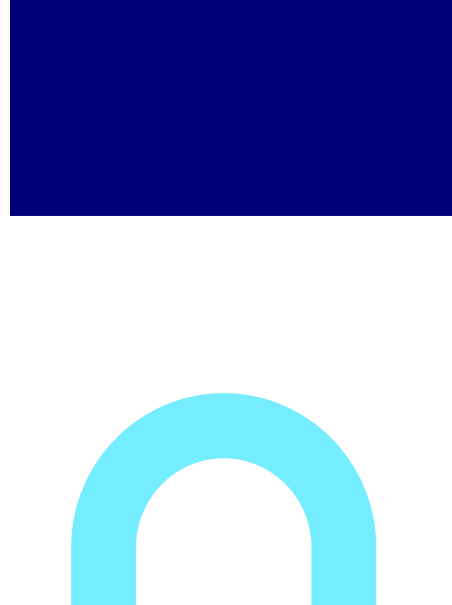

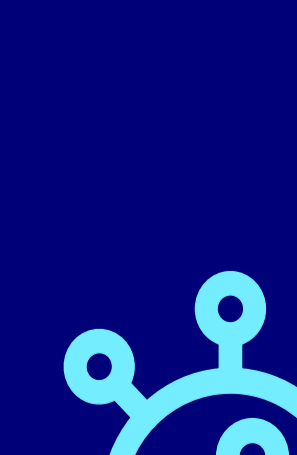

To date we have trained 34 people at the UOC in responsible research and innovation, and we are putting new thought into participatory teaching processes thanks to the European CIRCLET project.

The UOC: a benchmark for Open Science

We are part of various [national and international open science expert groups](#), such as the European University Association's Open Science Expert Group. We also participate regularly in [international conferences related to open knowledge](#).

Spreading open knowledge in times of COVID-19

We ran two online training courses on [emergency remote teaching](#) in April and June 2020. Thanks to this initiative we were able to share the UOC's experience in online education with more than 9,900 people from around the world.

We have also unveiled our [Open knowledge portal](#) to showcase and promote the knowledge generated at the UOC.
